

A photograph of a modern office hallway. The floor is covered with a grey, textured mat. Three people are walking through the hallway, their figures slightly blurred to suggest motion. The walls are white with grey accents, and there are large windows on the right side. The lighting is bright and even.

access®

for interior use in everyday traffic environments

Access is an easy to install, primary barrier mat suitable for medium levels of foot and wheeled traffic, e.g. in schools, offices and some high street shops. Due to its non-metallic nature, Access is ideal for use where electronic tagging systems operate.

Access comprises a moulded black or grey rubber base with 100% solution-dyed nylon wipers. The wipers are available in a wide range of colours to complement any design and can be co-ordinated with Boulevard 6000 (BREEAM rated) and Boulevard 5000HD for a complete barrier matting system (see pages 22-24).

Access is available in 12mm thickness for recessing into a matwell or surface mounting when used with a suitable ramping strip. Access 17mm is for recessing only. Spacer strips are supplied to provide a neat finish to the mat.

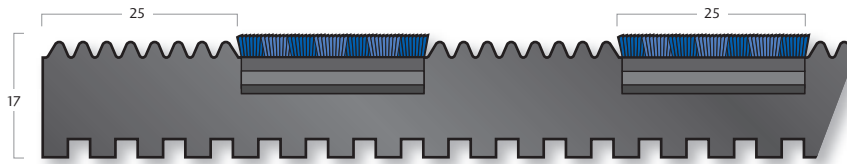

The mats are provided in 0.5m x 2.0m modules and are supplied oversized for shaping and trimming on site. Access is tested for dimensional stability and flammability tested to BS 4790.

features

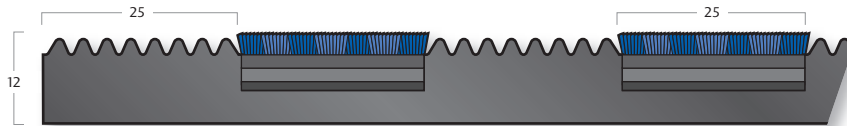

- Interior Use
- Closed Construction
- Moisture Removal
- Coarse Dirt Removal
- Suitable for High Heels
- Co-ordinates with: *Boulevard 6000 (BREEAM rated), Boulevard 5000HD*
- Compatible with Electronic Tagging Systems
- Ease of Maintenance
